Please attempt to determine a Lat / Long for the contact at initial detection. We recommend using JMPS to reference the sensor-derived bearing and range relative to the bullseye you had in use. If that method is not available, any reasonable derivation of location will work, but please be as specific as possible and make a note in the comments section. These locations may be used to cue other means of tracking.

Was the contact moving? Yes

Please use the field below to describe the contact and any interaction in your own words with as much detail as possible. Please be sure to include any detail not included in questions above.

1.4a observed 3x possible unidentified small air contacts while conducting routine operations in the North Arabian Sea. Negative ES, radar track, and IFF track. Distance to contact was unknown. Speed of contact was unknown. Precise course of contact was unknown, but appeared to be on a westerly heading. No interaction took place between 1.4a and the unknown air contacts. Initially observed 1x unknown air contact and tracked it before losing sight as it went behind a cloud. When contact on the unknown air contact was regained, 2x additional unknown air contacts were seen due east of the location of the initial contact. All 3x unknown air contacts appeared to maintain their relative course, speed, and altitude.

Don't use the purple "submit" button! Save this form with filename "**Date_Squadron_RF.pdf**" and email it to (b)(6) (Also in the global). For troubleshooting, call (b)(6)

Thank you for your time. Please ensure all display tapes are ripped for the entire time of interaction and saved as a .wmv (Example: 4 May VFA-106 HUD.wmv). Squadron intel personnel shall upload those files to the repository located at this link.
